[nicholas.e.bonello@gmail.com](mailto:nicholas.e.bonello@gmail.com) • [nick-eb.dev](https://nick-eb.dev) • [github.com/hadobedo](https://github.com/hadobedo) • (647) 327-0135 • Tottenham, ON

## EDUCATION

---

### York University

Graduated: May 2026

BSc. Specialized Honours Computer Science

Toronto, ON

- **Relevant Coursework:** Database Systems, Advanced Object Oriented Programming, Software Design, Building E-Commerce Systems, Communication Networks, Operating System Fundamentals

## EXPERIENCE

---

### Software Developer

Feb 2020 – Present

Lyte Interactive

Remote (Contractor)

- Designed high-availability backend systems (**Lua, JavaScript**) for a top Roblox studio, processing continuous data streams, supporting peaks of over **3 million daily active users**
- Engineered scalable client-server architectures using **Service-Oriented Architecture (SOA)**, **UML**, and **OOD/OOP** principles; guided **Agile SDLC** feature rollouts to maximize uptime and player retention

### Software Developer & Technician

Sept 2020 – Present

Btek RE Products

Tottenham, ON (Contractor)

- **Modernized** a legacy 32-bit Windows app by reverse-engineering serial protocols to build **Streamview**: a cross-platform IoT client for remote logging and field diagnostics of Skystream wind turbines
- Built a full-stack application with cloud IoT backend (**FastAPI, Flutter, TimescaleDB**); deployed containerized **REST APIs** via **Docker/Portainer** to securely process live turbine data
- Engineered scalable telemetry ingestion and automated **CI/CD workflows** with OTA update packaging to guarantee system reliability and streamline remote maintenance
- Executed advanced field diagnostics on Skystream wind turbines, parsing complex electrical schematics to **troubleshoot hardware and software faults**

## CURRENT & PAST PROJECTS

---

### Streamview | Pending Launch

April 2026 – Present

- Re-architected a 20-year-old legacy Windows app into a cross-platform monitoring client (**Flutter/Dart**), currently in the final stages of development
- Developed secure **REST APIs** and batch sync workflows using **JWT authentication** to guarantee reliable data capture and cloud sync in low-connectivity environments
- Designed a time-series architecture (**PostgreSQL/TimescaleDB**), building **ETL** processes to optimize JSON payloads and continuous aggregate views for high-performance reporting

### Technical Blog & OSS Contributions | [nick-eb.dev](https://nick-eb.dev)

Ongoing

- Authored in-depth tutorials and shared open-source configurations on **Linux virtualization**, software development, and hardware diagnostics to assist the broader developer community
- Accelerated complex codebase navigation using AI tools in order to author & submit a **Linux kernel** patch which resolved a hardware-level speaker bug on Lenovo laptops.

## SKILLS

---

**Languages:** Python, JavaScript/TypeScript, Dart, Lua, Java, C/C++, SQL, HTML5/CSS, XML, GeoJSON

**Frameworks/Libraries:** FastAPI, Node.js, Flutter, React, Pandas, PyTorch, TensorFlow, ONNX, GIS

**Tools/Technologies/Other:** Docker, MSSQL, PostgreSQL, TimescaleDB, SSRS, Power BI, Power Automate, SharePoint, Git, REST, Linux Virtualization, LAN/WAN Networking, Class G Driver's License
